                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a xylanolytic enzyme of Bacillus agaradherens NCIMB 40482. Xylanolytic enzymes are used for enzymatic breakdown of agricultural wastes for production of alcohol fuels, enzymatic treatment of animal feeds to release free pentose sugars, manufacturing of dissolving pulps yielding cellulose and bio-bleaching of wood pulp. They are also used for treatment of lignocellulostic material e.g. paper and pulp, or as an animal feed additive. (Updated on 25-MAR-2003 to correct PR field.)                                                           A DNA sequence (AAT16102) coding for a xylanase precursor (AAR92054) was isolated from a gene library of Bacillus sp. 720/1 (LMG P-14798). The sequence (AAT16103) for the complete gene including 5' and 3' untranslated sequences was also obtd. The gene may be incorporated into a vector and expressed from either its own promoter or from the Bacillus pumilus PRL B12 promoter (see AAQ73996), and used for prodn. of recombinant thermostable xylanase in transformed hosts, pref. Bacillus licheniformis or B. pumilus The enzyme is useful in the paper-pulp, animal feed and baking industries. (Updated on 16-OCT-2003 to standardise

The present sequence encodes a polypeptide with xylanase activity used in an example of the present invention. The present invention describes a novel method for providing a novel DNA sequence encoding a polypeptide from a microorganism with an activity of interest. The method comprises:

(i) PCR amplification of the DNA with PCR primers with homology to (a) known gene(s) encoding a polypeptide with an activity of interest; (ii) linking the obtained PCR product of a 5' structural gene sequence and a 3' structural gene sequence, (iii) expressing the resulting hybrid DNA sequence; (iv) screening for hybrid DNA sequences encoding a polypeptide with the activity of interest or a related activity; and (v) isolating the hybrid DNA sequence identified in step (iv). This method provides for having to cultivate and isolate the microorganism without
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  177
                                                                                                             The sequence encodes an alkaline endo-1,4-beta-D-xylanase (G-type) from Bacillus sp. 1-43-3. Fragments of the sequence (e.g. the internal fragments given in AAQ92877) may be amplified by polymerase chain reaction, e.g. using piners with sequences AAQ92865, AAQ92867, AAQ92868 and AAQ92869. The DNA may be cloned in Escherichia coli using a plasmid vector for recombinant xylanase production. The xylanase may be used in the paper and pulp industries, where it produces an increase its obtains so is seftwood pulp of at least 1.0 over non-enzymatically treated pulp in an ECF pulp bleaching process, at pH 9.0 and 65 deg C. The enzyme may be used in production of paper, board and fluff pulp, and has low cellulase activity. The increased brightness produced using the xylanase allows reduction in the amount of bleaching chemicals used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                57

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacillus derived xylanase active over wide pH range - used in treatment of paper pulp, animal feeds and in bakery goods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (I_MG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A DNA sequence (AAT16101) coding for a thermostable mature xylanase (AAR92053) was isolated from a gene library of Bacillus sp. 720/1 (LMG 14798). Sequences were also obtd. (see AAT16102 and AAT16103) for the xylanase precursor and for the complete gene including 5' and 3' untranalated sequences. DNA coding for the mature enzyme may be incorporated into a vector and expressed from either its own promoter from the Bacillus pumilus PRL B12 promoter (AAQ73996), and used for prodn. of recombinant xylanase in transformed hosts, pref. Bacillus licheniformis or B. pumilus. The enzyme is useful in the paper-pulp, animal feed and baking industries. (Updated on 16-OCT-2003 to standard)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540
                                                                                                                      The present sequence represents a positive clone for xylanase activity from an example of the present invention. The present invention describes a novel method for providing a novel DNA sequence encoding a polypeptide from a microorganism with an activity of interest. The method comprises: (i) PCR amplification of the DNA with PCR primers with homology to (a) known gene(s) encoding a polypeptide with an activity of interest; (ii) linking the obtained PCR product of a 5' structural gene sequence and a 3' structural gene sequence (iii) expressing the resulting hybrid DNA sequence; (iv) screening for hybrid DNA sequences encoding a polypeptide with the activity of interest or a related activity; and (v) isolating the hybrid DNA sequence identified in step (iv). This method provides for identification and isolation of sequences from microorganisms without having to cultivate and isolate the microorganism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          361 GAATATTATATTCTCGATAGTTGGGGCAACTGGCGTCCACCAGGGGAACGCCTAAGGGA 420

(I) is useful for dough conditioning, beverage production, as a nutritional supplement in animal feed; reducing light in a wood or a wood product; and for aliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   620 AIGAGACAAAAGAAATIGACGITGAITITTAGCCITITITAGITITGCACIAACCITA 679
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antibacterial; fungicide; thermostable xylanase activity; dough conditioning; beverage production; nutritional supplement; animal feed; lignin reduction; wood product; xylan; bacterial infection; fungal infection; coccidiosis; gene; ds.

A chromosomal fragment obtained from isolate BDRM was subcloned and expressed in Escherichia coli JM109. The sequence of the xylanase gene (as a 1022 bp Sau3AI fragment) carried by a selected transformant is given in AAQ80923
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TCGATGACACTCAATAACGGGGGGCATTTAGTGCAAGCTGGAACAATATTGGAAATGCC

The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (SI), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning; beverage production; as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 979
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  414
                                                                                                                                                                                                       The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning, beverage production, as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           739

```

The present sequence is a DNA encoding xylanase A (XynA) from Clostridium stercorarium. XynA contains family VI cellulose binding domain (CBD) which is homologous to the CBD of xylanase Z (XynZ) of Clostridium thermocellum. XynZ is an enzymatic component of C. thermocellum cellulosome and has a multi-domain structure which includes a dockerin domain, a catalyvic xylanase domain, a family VI cellulose binding domain and a domain of unknown function. The unknown domain in the N-terminal region of XynZ has been found to contain feruloy! (phenolic acid) esterase which is involved in the degradation of plant cell wall material. The novel feruloyl esterase is thermostable, easy to purify, has high temperature optima and stable over a wide pH range. The enzyme is used for producing ferulic acid from wheat bran or agricultural byproducts, treating grasses or other plant materials used in the pulp and paper industries, in feed processing and as a food additive DB 3; Length 2364; Sequence 2364 BP; 791 A; 428 C; 458 G; 687 T; 0 U; 0 Other; Score 255.6; 16.9%; Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a RT46B.1 xynB gene and encodes a xylanse enzyme. The present sequence is derived from a gene contained within Dictyoglomus thermophilum strain Rt46B.1. The xylanase is contained within the family of enzymes known as G-xylanases, and has beta -1,4-xylanase activity. The enzyme has high activity and high thermal stability with optimum activity at 85 degrees Celcius and pH 6.5. The xylanase enzyme is used for the biological bleaching of cellulose products, especially paper pulp. Use of the enzyme ensures that waste streams from the biological bleaching will include less toxic material
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           451

The gene was obtd. by genomic walking PCR of DNA from an extremely thermophilic bacterium, strain TG456 (CBS 213:94), isolated from a New Zealand hot spring. The gene can be inserted into a vector and used for the prodn. of recombinant xylanase D in microbial host cells, esp. Escherichia coli. (Updated on 25-MAR-2003 to correct OS field.)

having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypepitde as thermostable xylamase activity. (I) is useful for dough conditioning, beverage production, as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylamase activity which involves amplification of a template nucleic acid with a primer pair capable of amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylamase protein isolated from an environmental
                                                                                     Novel xylanase recombinant polypeptide useful for improving textile texture, treating paper, eliminating microorganisms.
                                                                                                                                                                                                                   an isolated or recombinant polypeptide (I)
                                                                                                                                                               Claim 1; SEQ ID NO 227; 570pp; English
                                                                                                                                                                                                                      The invention describes

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                 1 AAATTGAATTGTGTATATCT......TGAAACACCTCCGTCACTAG 1513
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 35,

Patent No. 6346407
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: ANDREE LAHAYE
APPLICANT: RIENE DEDOUX
APPLICANT: RENE DETROZ
TITLE OF INVENTION: Xylanase, microorganisms produced it,
TITLE OF INVENTION: And uses thereof
TITLE OF INVENTION: and uses thereof
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSEE: WILLIAM BRINKS HOFER GILSON & LIONE

Patent No. 6270968

GENERAL INFORMATION:

APPLICANT: Dalboge, Henrik

APPLICANT: Sandal, Thomas

APPLICANT: Barge, Diderichsen

ITILE OF INVENTION: Method Of Providing No. 6270968el DNA Sequences

FILE REFERENCE: 4772.204-08

CURRENT APPLICATION NUMBER: US/09/189,060B

CURRENT APPLICATION NUMBER: US/09/189,060B

PRIOR FILING DATE: 1997-05-12

NUMBER OF SEQ ID NOS: 74

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1

LENGTH: 744

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2, Application US/08470953A

Sequence 2, Application US/08470953A

Patent No. 6346407

GENERAL INFORMATION:

APPLICANT: BRIC DE BUYL

APPLICANT: BRIC DE BUYL

APPLICANT: RENE DETROZ

TITLE OF INVENTION: Xylanase, microorganisms produced it,

TITLE OF INVENTION: DNA molecule, processes for preparation of this xylanase

TITLE OF INVENTION: and uses thereof

NUMBER OF SEQUENCES: 29

CORRESPONDENCES: 29

CORRESPONDENCES: 29

CORRESPONDENCE ADDRESS:

ADDRESSEE: WILLIAN BRINKS HOFER GILSON & LIONE

STREET: 2000 K St., N.W., Suite 200

CITY: Washington
                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                941 TATTTATGCGTCTATGGTTGGACTGTTGACCCTCTTGTCGAATATTATATTGTCGACAGT 1000

RENE DETROZ
TITLE OF INVENTION: Xylanase, microorganisms produced it,
DNA molecule, processes for preparation of this xylanase
and uses thereof
                                                                                                                                                                                                                                                                                                                               1039
                                                                                                                                                                                                                                                                                                                                                                                                                                            1099
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1339
